

Objective & Strategy

This strategy seeks to optimize returns in a risk-controlled framework, delivering consistent added value over a full business cycle. The strategy is designed to capture the benefits of diversification and the advantages that come from the dissimilarity in return patterns across different asset classes. The strategy intends to invest primarily in higher yielding securities that retain attractive growth potential. In addition to this strategic allocation, the manager performs tactical active risk management driven by the manager's view of current market conditions.
